Live project: https://fun-facts-zeta.vercel.app

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience building React/Django web applications, integrating REST APIs, developing data-processing workflows, and supporting cloud deployments. At ORIA Learning, work spans a multi-tenant application, PostgreSQL-backed data flows, and Railway-hosted delivery. Also developing an interactive React/Canvas project and building JavaScript frontend projects. Brings machine-learning foundations, data-quality experience, and technical communication skills; interested in frontend/product engineering and practical AI-enabled applications.

TECHNICAL SKILLS

Frontend & Interactive UI: JavaScript, React, HTML5, CSS3, HTML5 Canvas API, Three.js, vector mathematics, real-time state and coordinate tracking
Backend & APIs: Python, Django, Django REST Framework, REST APIs, API integration, parsing and data serialization
Data, Cloud & Delivery: PostgreSQL query optimization, Railway, Microsoft Azure, Google Cloud Platform, Docker, Kubernetes, CI/CD pipelines
AI/ML & Data Quality: TensorFlow, AI workflow design, PCA, NMF, ensemble techniques, RLHF model evaluation, 3D point-cloud segmentation, LiDAR cuboid annotation, sequential frame tracking, data QA/validation

PROFESSIONAL EXPERIENCE

Technical Lead & Data Infrastructure Engineer | ORIA Learning | *Jan 2025 - Present*

- Architected and deployed a multi-tenant web application using React and Django REST Framework, implementing separation of tenant data.
- Connected frontend workflows to backend services and optimized PostgreSQL queries supporting user sessions and application data flows.
- Managed a containerized Railway deployment and CI/CD workflows; built onboarding and operational-tracking logic to support releases and a 99.9% system-uptime baseline during critical rollouts.

Technical Enablement Lead & Systems Educator | Eastfield Imperial School | *Jan 2025 - Present*

- Design and deliver technical learning modules that translate computing concepts and development workflows into practical guidance for learners and staff.

SELECTED PROJECTS

Founder & Lead Architect | NeuroTyper Adaptive | *Jan 2026 - Present*

- Developing an interactive React/HTML5 Canvas application focused on precise rendering, real-time coordinate tracking, and responsive input-state calculations.
- Implementing mathematical state tracking to process rapid, continuous sequences of user-input coordinates.

Project Lead - Data Systems | Adaptive Focus (3MTT Showcase) | *Mar 2026 - May 2026*

- Developed Python/Django data-processing endpoints for parsing, serializing, and monitoring user-progress metrics and dataset efficiency.
- Designed asynchronous frontend feedback flows to support data auditing and validation workflows.

Frontend Practice Projects: Published a Fun Facts web app on Vercel and built a JavaScript password generator with generated-password output and copy-to-clipboard behavior.

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science | Federal University Wukari, Taraba State | Graduated July 2022
Certifications: IBM Machine Learning Expert (Coursera); Building AI Systems (DeepLearning.AI); Cloud Architecture Certification (Stanbic IBTC DISEP 4.0 Scholarship Recipient); Data Science Professional (NITDA).
